

# Computer Room

A Computer Room is available on a 24/7 basis exclusively for residents. It is located on the main level just beyond the Game Room in the hallway leading to OakBridge Terrace. An access card is necessary to gain entrance. In the room are five (5) computers with full access to the Internet and one (1) HP color printer. The printer is wirelessly connected to all of the computers enabling anyone to print from any computer. In the past three years the Brittany Pointe Executive Director authorized an upgrade making three computers complete with all of the components, including DVD drive and speakers, built into the monitor and the computers loaded with Microsoft Windows 7 operating system. The other two older computers remain with Microsoft Windows XP. (In recent years the use of the computer room has diminished as residents are procuring their own iPads or laptop computers.)

In addition, you may also use the printers to print from your tablet or cell phone, provided your device uses the Android operating system. Each of the computers is password protected and you may obtain a password by contacting Robert Burns. Residents are cautioned not to make changes to the computers such as changing resolution, changing font size or other changes from the current set-up. These settings are the most common and changing causes difficulty for less proficient users. Should you wish to use the printer, you will need to supply your own paper.

Also there is a computer in the library with a dedicated printer. The computer in the library is open to all and does not require a password. This computer has a listing of all the hardcover books in the library listed by Author and by Title. These lists are updated monthly and are easily accessed by double clicking on the appropriate icon on the desktop. There is also a listing of all of the videos that are available for loan from the video library with an icon on the desktop. When you are finished using the library computer you may turn off the monitor but **do not turn off** the computer because the computer is set to automatically perform virus scans every night.
